Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The cells of *Agrobacterium* strains were grown in YEA medium at 28°C for 24 h. The cell concentration was adjusted to 10<sup>8</sup> cells/ml. The cells were then mixed with the plant protoplasts and cocultured for 48 h. The cells were then washed and the protoplasts were cultured on the selective medium. The transformation efficiency was determined by the number of transformants per protoplast. The results are shown in Table 1.
